Benchmarking

Report

2017 Fiscal Year

This report is a publication of the Pacific Power Association (PPA).

The World Bank through the Sustainable Energy Industry Development Project (SEIPD) implemented by the PPA provided technical assistance and publication support.

This summary report was prepared by Krishnan Nair (World Bank consultant, Fiji, funded by the World Bank financed Sustainable Energy Industry Development Project (SEIDP) with input data provided by the participating Pacific Power Association utility members under the guidance of, and with overall support from the Pacific Power Association Secretariat based in Suva, Fiji.

The views expressed in this report are those of the authors and do not necessarily reflect the views and policies of PPA or its Board of Governors, the governments they represent. None of the above parties guarantees the accuracy of the data included in this publication or accepts responsibility for any consequence of their use.

The use of information contained in this report is encouraged with appropriate acknowledgement. The report may only be reproduced with the permission of the PPA Secretariat.

PACIFIC POWER

Benchmarking

Summary Report

2017 Fiscal Year

PREPARED BY THE PACIFIC POWER ASSOCIATION (PPA)

SEPTEMBER 2018

1. INTRODUCTION

1.1 Benchmarking Overview

The 2017 exercise involves data from 22 power utilities compared to 17 for the 2016 Fiscal Year.

Table 1.1 shows the utilities that have participated in the Pacific benchmarking initiative since 2001. This round of benchmarking covered data governance, gender composition of the workforce, and KPI operational and performance data KPIs.

2. GOVERNANCE

2.1 Key Governance Results

The Governance data for the 2017 benchmarking has not changed at all compared to 2016 or earlier benchmarking periods for that matter, as there has been no significant government policy changes in the various Pacific Islands and Territories. This situation is also reflected in the governance KPIs.

2.2 Governance Analysis

The composite governance score introduced in the 2012 Fiscal Year Report has again been utilised in this years' power benchmarking exercise for the purpose of analysing if good governance mechanisms are delivering tangible benefits to utilities in the form of improved financial performance. The composite score is comprised of the same weighted indicators as the 2012 Fiscal Year Report, determined from relevant responses in the governance questionnaire using a governance scorecard (Table 2.2).

Table 2.2: Governance Scorecard

Governance Indicator	Good Governance	Poor Governance	Weighting
Are Ministers appointed to the Board?	No	Yes	12%
Are Ministers/ public servants representing the line/sector Ministry appointed to the Board?	No	Yes	12%
Is a Code of Conduct in place and implemented?	Yes	No	8%
Is a commercial mandate in place and implemented?	Yes	No	19%
Is the CEO on performance contract with annual reviews?	Yes	No	8%
Has a Strategic Plan (at least 3 year forecasts) been adopted and implemented?	Yes	No	15%
Is the Annual Report (audited) completed within four months of end of reporting year?	Yes	No	19%
Does the Annual Report disclose performance against Plan?	Yes	No	8%
Total Score			100%

Note: A good governance score results in full marks for each indicator, whilst a poor governance result receives a zero for each applicable indicator. In regard to the indicator on Annual Reports being completed within four months of the end of the reporting year, this has been used as a good practice standard but it is acknowledged that several utilities have agreements with their regulators that allow for longer periods for production of Annual Reports.

The composite governance scores for utilities which provided sufficient responses to enable the weightings to be calculated are represented in Figure 2.1.

3. GENDER

Overall, the number of females employed as a proportion of total staffing in the Pacific power utilities has slightly reduced from previous years, 17.8% in 2017 as compared with 21.3% in the 2015 FY.

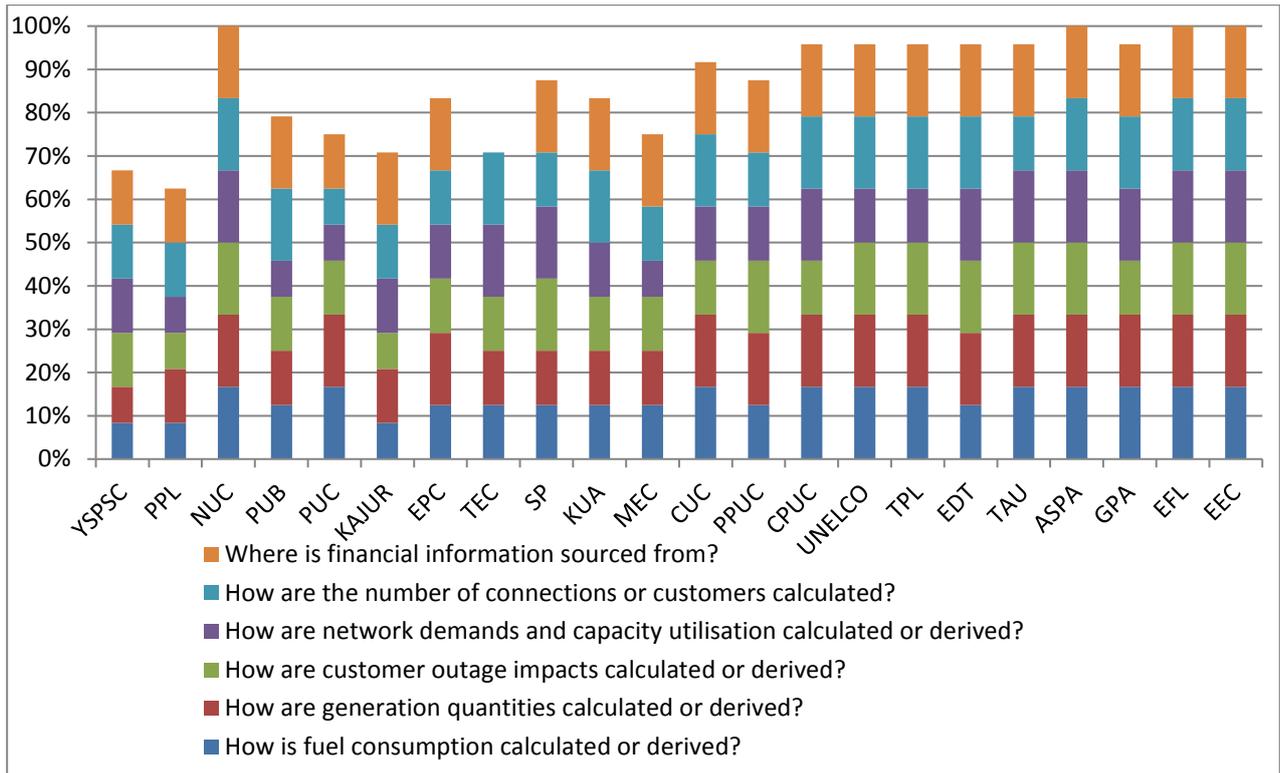

Table 3.1: Key Gender Statistics

4. DATA RELIABILITY

. Figure 4.2 aggregates the reliability scores submitted by each of the utilities in order to rank the relative reliability of the data that was submitted. These aggregate scores have furthermore been utilised as a weighting in this reporting in calculating the Composite Indicator for the 2017 FY.

5. KPI RESULTS

5.1 Introduction

This section provides performance results for the 17 (2016 FY) and 22 (2017 FY) utilities that participated in each relevant reporting year. The results from the previous 2015 FY reported have also been included for further longitudinal comparison. The results are comprised of 46 KPIs, with each indicator graphically presented with both the regional average (arithmetic mean) and median (middle) values.

An indication of utility size is also provided via a colour coding of red, orange or yellow as determined by utility size in accordance with the PPA's membership level categorisations: yellow indicates an annual peak load of less than 5MW (small); orange indicates an annual peak load of between 5MW and 30MW (medium); and red indicates an annual peak load of 30MW or greater (large). In order to facilitate comparison of results by size, all graphs are shown in the order of minimum to maximum demand. Table 5.1 furthermore provides an overview of some key characteristics of the participating utilities, including the applicable colour coding.

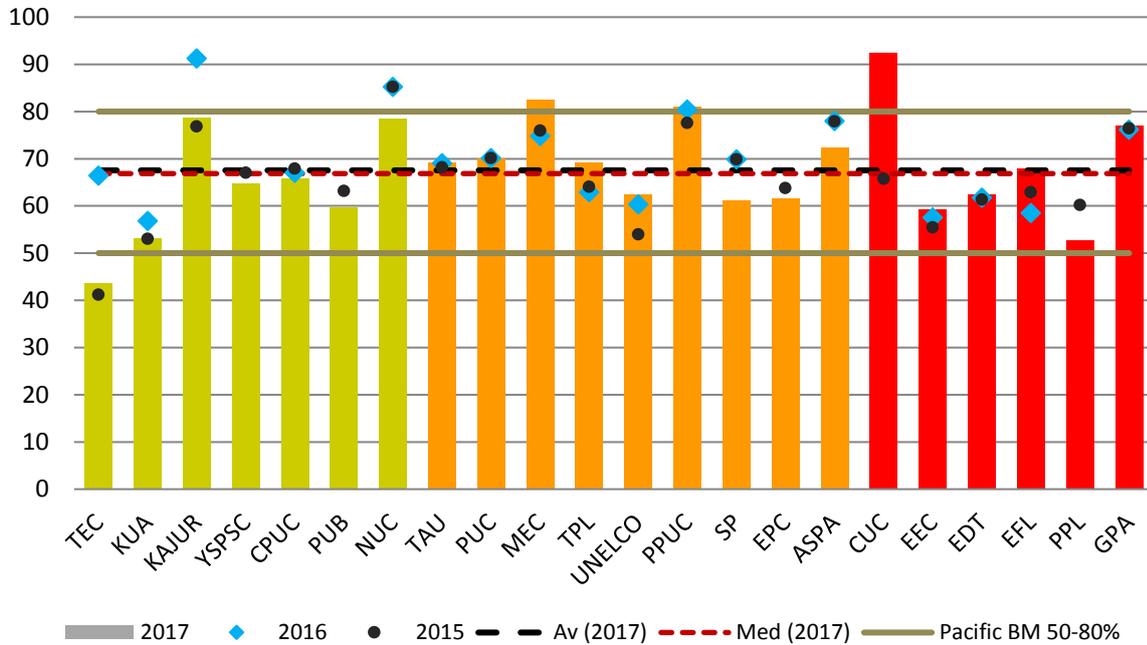

Table 5.1: Utility Key Characteristics

5.7 Financial Indicators

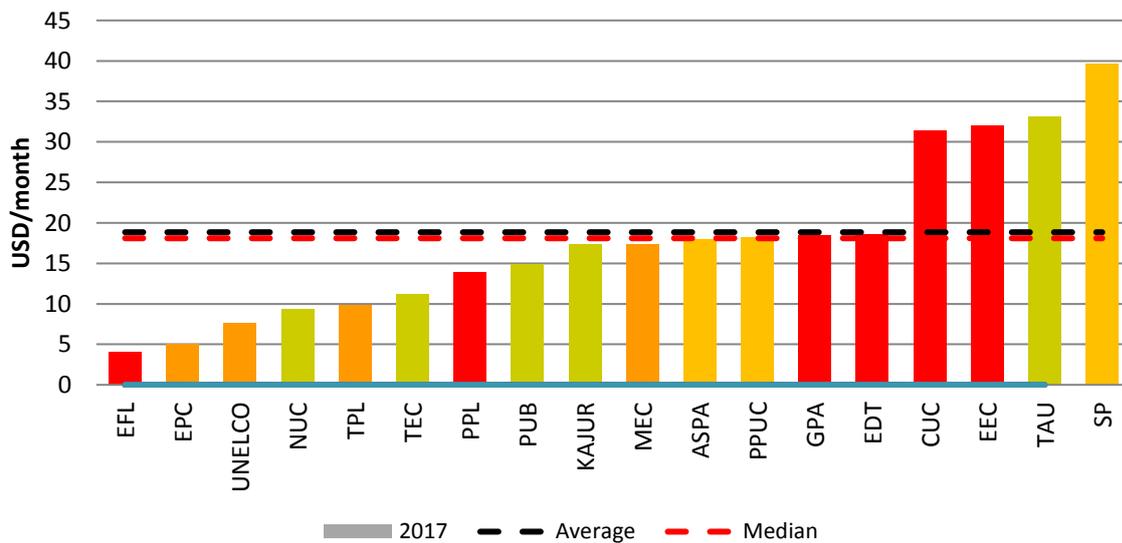

(i) Tariff Analysis

General

Conducting tariff analysis of Pacific utilities is highly complex due to the different tariff schedules and structures for the total 22 Pacific power utilities.

5.9 Overall Composite Indicator

The overall composite indicator of utility performance developed in 2011 has been used again this year to rank comparative performances between utilities. Where gaps existed in the data submitted by some utilities it was not possible to calculate an aggregate score.

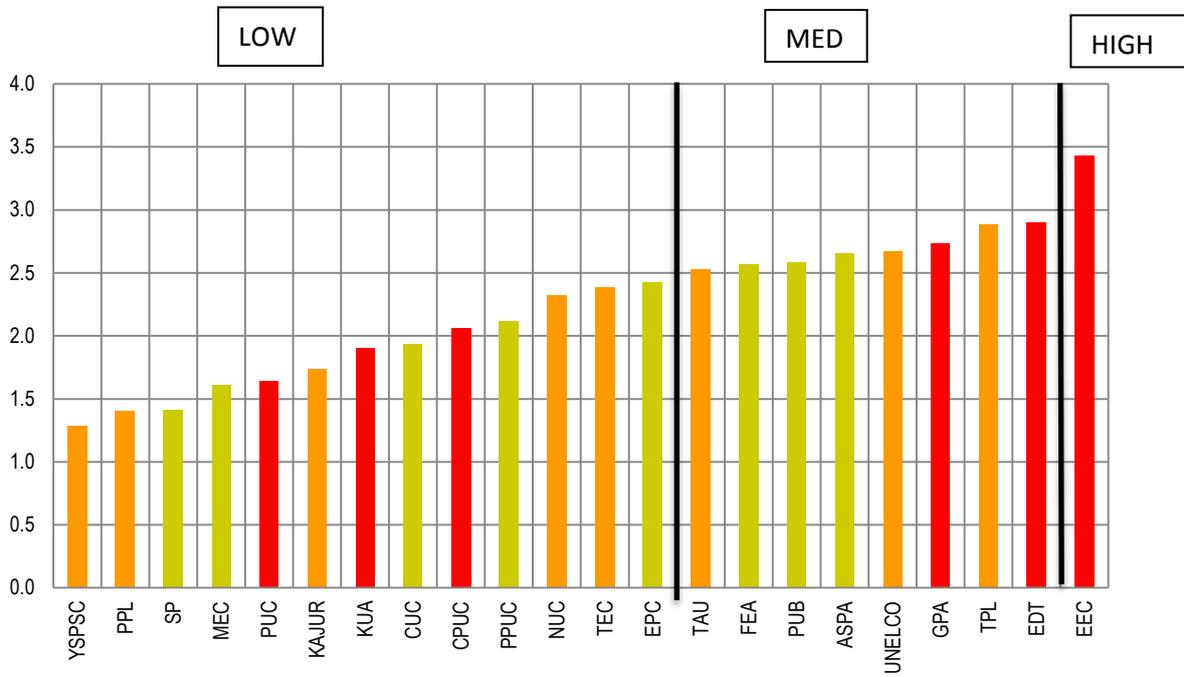

The overall composite indicator is a simple indicator that equally weights generation efficiency, capacity utilisation, system losses and overall labour productivity, as derived from quantitative scores on a scale up to 4.0. Overall, this was considered to be a valid assessment of technical performance.

Components of Composite Indicator (Maximum score 4.0)
▪ Generation efficiency: specific fuel consumption (25%)
▪ Efficient utilisation of assets: capacity factor (25%)
▪ System losses: network delivery losses (25%)
▪ Overall labour productivity: customers per full time utility employee (25%)
Final score weighted in terms of comparative data reliability

Table 5.4: Composite Indicator Components for 2017FY

Results are summarised in Figure 5.35. The scores for previous years have not been shown this year as the components of the indicator have changed (data reliability weighting now incorporated). Only data for those utilities with sufficient data for the 2017 FY have been shown.
