

WORK IN PARADISE ON THE ISLAND OF RAROTONGA

Generation Manager

About Us:

Te Aponga Uira (TAU) is the principal provider of electrical power generation in the Cook Islands and as such is dedicated to delivering reliable and sustainable electrical energy to the community of Rarotonga. We seek innovative and economic solutions for the evolving energy needs of our people and support the national commitment to a renewable energy future. We are a responsible, equal opportunity employer and invest in our staff through continuous professional & skills development, training, and health & wellbeing initiatives.

About the Job:

We have an exciting opportunity for a Generation Manager to join our team in Rarotonga. It is a full-time role suitable for someone who can readily assimilate into the life and workings of the Cook Islands.

We are looking for a professional electrical engineer manager to take responsibility for the strategic direction for Te Aponga Uira's (TAU) generation system development and major works, and the management of the operation and maintenance of all TAU's generation assets. In particular, the Generation Manager will lead the development and delivery of major works associated with alternative energy initiatives undertaken to support Cook Islands national renewable energy goals. The Generation Manager will ensure compliance with strategic and regulatory requirements and will collaborate fully with TAU's other divisional teams through consultation, cross divisional engineering support, and mentoring.

This is a senior management position; the successful applicant will need time management and problem solving skills, along with the ability to lead, train and develop a team of technical people, providing motivation and guidance, monitoring of performance and the ability to communicate and collaborate at all levels throughout TAU.

The position reports to the CEO and to the Board of Directors as required.

About You:

The successful candidate will hold a recognised qualification in electrical engineering a proven track record of managing power generation systems with a strong technical background, and with a minimum of 6 years' experience at a senior level in the power generation industry.

You would be required to manage generation projects from design to implementation, including project planning, budgeting and resource allocation. Expertise in and experience with renewable energy projects would be a distinct advantage.

This is a rare opportunity to live and work in the paradise of Rarotonga in the South Pacific, where you will utilise your engineering and management skills in a unique and diverse environment.

An attractive remuneration package is envisaged.

A full job description and information package is available on request. Applications should include a covering letter, comprehensive CV and be submitted in writing to Eileen Turepu and Ross Bridson on emails eturepu@gmail.com. RBridson@electricity.co.ck
