30TH ANNUAL PPA CONFERENCE

BOARD OF DIRECTORS WORKSHOP

September 26, 2023

CROWNE PLAZA RESORT, SAIPAN

Hawaii's Isolation Poses a Serious Challenge

In 2008, nearly
90% of Hawaii's
energy was met
using fossil fuels

100% of the
crude oil for
the State is
imported

Threat to Hawaii's:

- Security
- Economy
- Environment

Hawaii ranks #1 in U.S. electric
energy costs:

47.1 cents/kWh	Molokai
45.9 cents/kWh	Lanai
41.9 cents/kWh	Hawaii
37.8 cents/kWh	Maui
35.5 cents/kWh	Oahu
(Avg. residential rates for 2014)	
11 - 12 cents/kWh	U.S. avg.

Proven Advanced Inverter Functions Enable Higher PV Circuit Penetration

IEEE 1547-2018 standard

- Provides performance requirements for generation connected at the distribution level, including inverter-based generation.
- Addresses issues related to high penetration levels of inverter-based generation, whereas previous IEEE 1547-2003 version assumed low level of distributed generation.

Online Interconnection Application

The screenshot shows the Hawaiian Electric Customer Interconnection Tool portal. At the top, the Hawaiian Electric logo is on the left, and navigation tabs for Home, Applications, and My Account are in the center. The main content area is divided into three columns. The left column contains a welcome message for Marc Matsuura, a list of portal functions (submit applications, view projects, view reports, manage account), technical notes about browser compatibility, and a 'Start a New Application' button. The middle column has a 'View Saved and Submitted Projects' section with a 'View Projects' button, and an 'Applications Available' section for customer self-supply. The right column features a vertical 'Interconnection Application Process' flowchart with six steps: 1. Apply for Interconnection, 2. Review Submittal Package for Completeness Review, 3. Review Technical Requirements for System, 4. Conduct Studies and Utility Install/Upgrades (if necessary), 5. Complete Project Validation, and 6. Execute Agreement (Customer Receives for Signatures). Each step is accompanied by a small icon and a downward arrow indicating the sequence.

Hawaiian Electric

Home Applications My Account

Welcome Marc Matsuura
to the Customer Interconnection Tool

This portal allows you to:

1. Submit new interconnection applications. [View Applications Available >](#)
2. View saved and submitted projects.
3. View Project Reports
4. Manage account details.

Technical Notes:

- Please do not use the browser's Back/Forward buttons to navigate the site.
- If you return to a previously-submitted page and make changes, you must resubmit the form.
- This website supports the following browser versions and higher: Internet Explorer 11, Edge, Chrome 49, Firefox 54, and Safari 6. Older versions will not function properly.

[Start a New Application](#)

View Saved and Submitted Projects

If you have already initiated or submitted an application, you may access its progress or status.

[View Projects](#)

Applications Available

The following interconnection applications are available for submission at this time through this portal.

CUSTOMER SELF-SUPPLY

- Non-Export - available to all types of generator technologies and sizes where energy will not be exported to the grid or where uncompensated export is acceptable.

Interconnection Application Process
How it works.

1. Apply for Interconnection
2. Review Submittal Package for Completeness Review
3. Review Technical Requirements for System
4. Conduct Studies and Utility Install/Upgrades (if necessary)
5. Complete Project Validation
6. Execute Agreement (Customer Receives for Signatures)

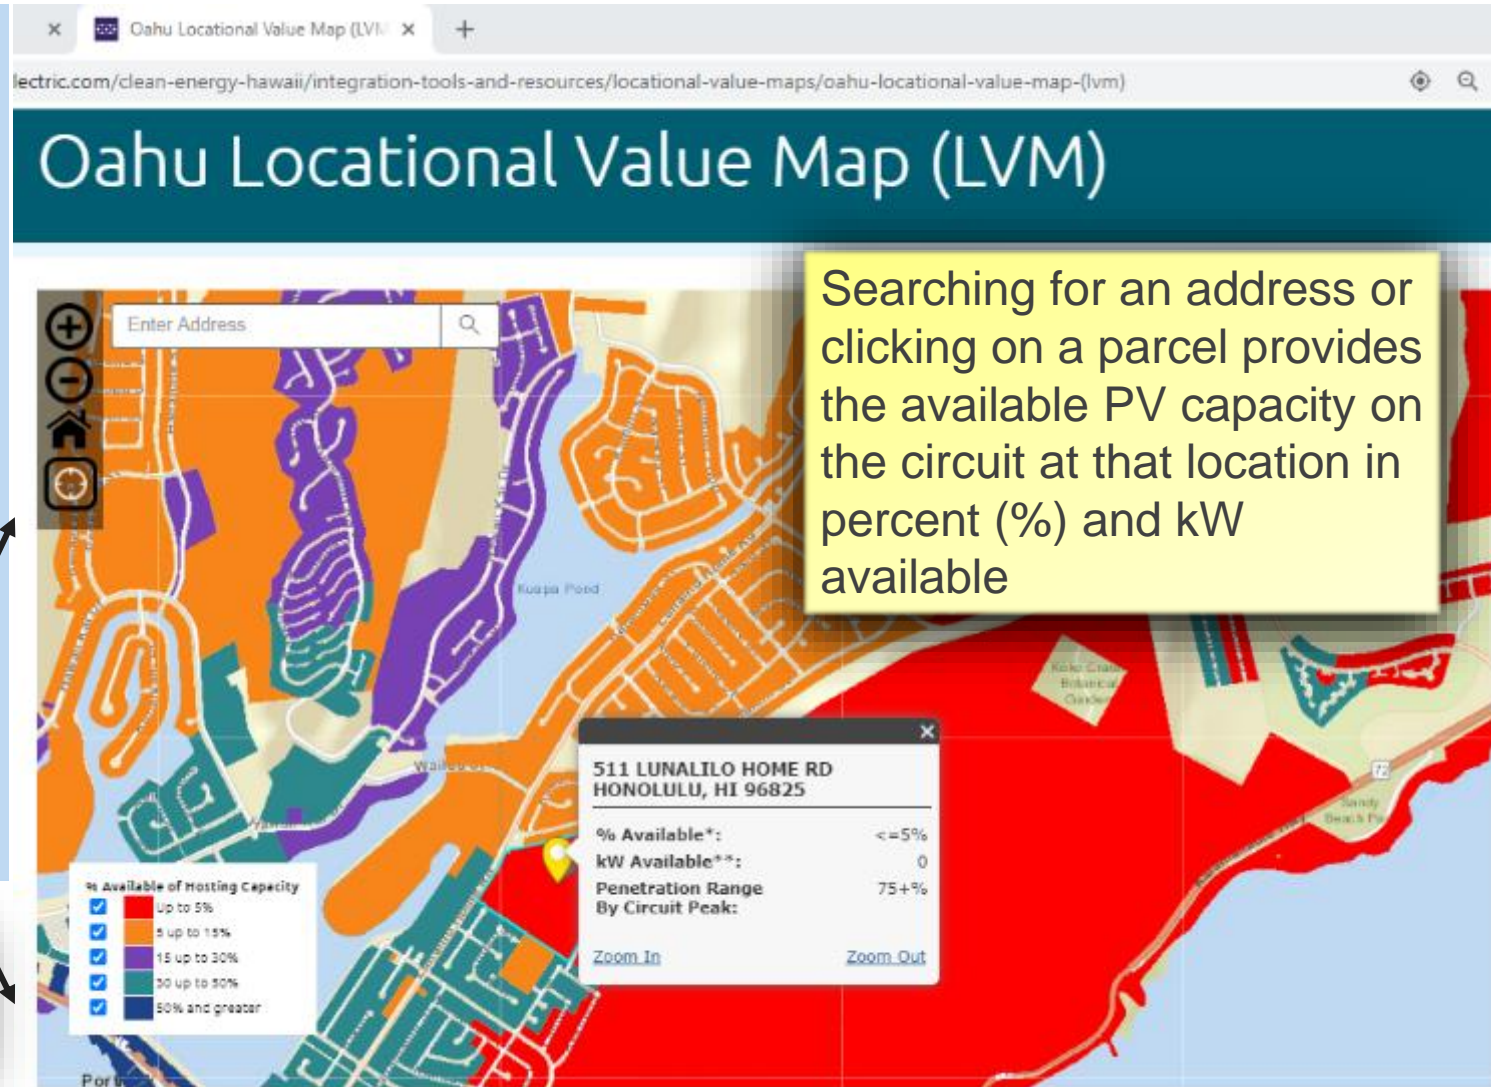

Hawaiian Electric has an online interconnection application portal to take the customer or their contractor through the application process.

The application portal gathers all the information required to complete the technical screening process.

Posted Hosting Capacity – Searchable Website

Provides on-line circuit hosting capacity limits by address on a searchable map.

DPV Staffing Needs Increase

Hawaiian Electric Company:

Application tracking and processing: 8 Positions

Technical screening and analysis: 4 to 5 full-time equivalent (FTE)

- Distribution Planning staff today has doubled to 14 planners since 2012
- Foundational work to update models and conduct hosting capacity studies added another 2 to 3 FTE for approximately two years

DPV program implementation requires additional administrative and technical staff/budget/capacity building to implement

Kaua'i

Kauai Island Utility Cooperative (KIUC) – 100% RE Experience

Kaua'i Island Utility Cooperative (April 2023)

System Peak: 80 MW

125 MW PV* / 7 MW Biomass / 16 MW Hydro*

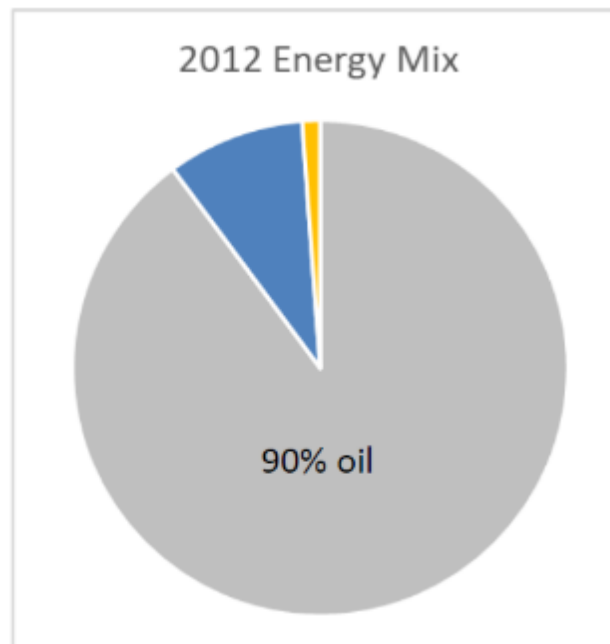

Installed PV: 156% of Sys. Peak

Kaua'i

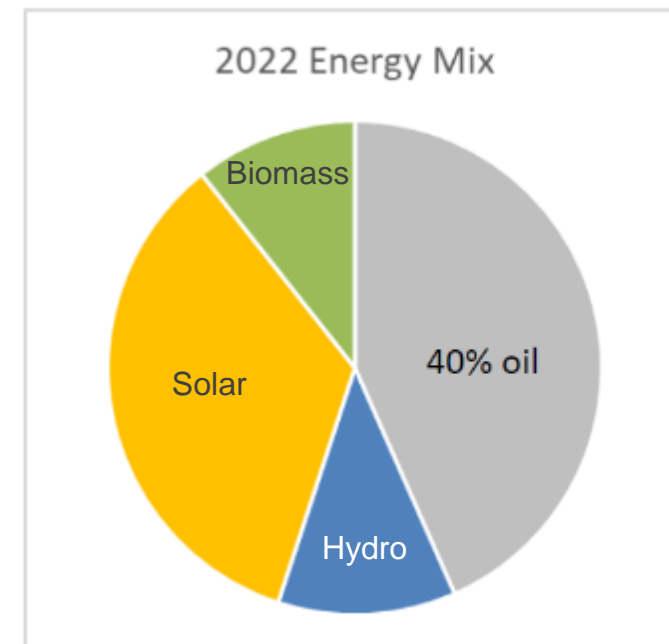

100%

- RE strategy focused on utility scale solar and batteries (with 46 MW of customer-owned solar, mostly rooftop)
- 35 – 80 MW daily demand profile
- 107 MW oil-fired capacity (Includes CTs able to operate in synchronous condenser mode)
- 50 MW / 260 MWh battery Storage (11MW / 29 MWh customer owned)

- First ran 100% RE in Feb 2019, for 30 minutes
- Thousands of hours across hundreds of days since then
- Daytime only (record 10 hours)
- Need more long-term storage to extend 100% RE to 24/7/365

Source: KIUC

Rate Stabilization

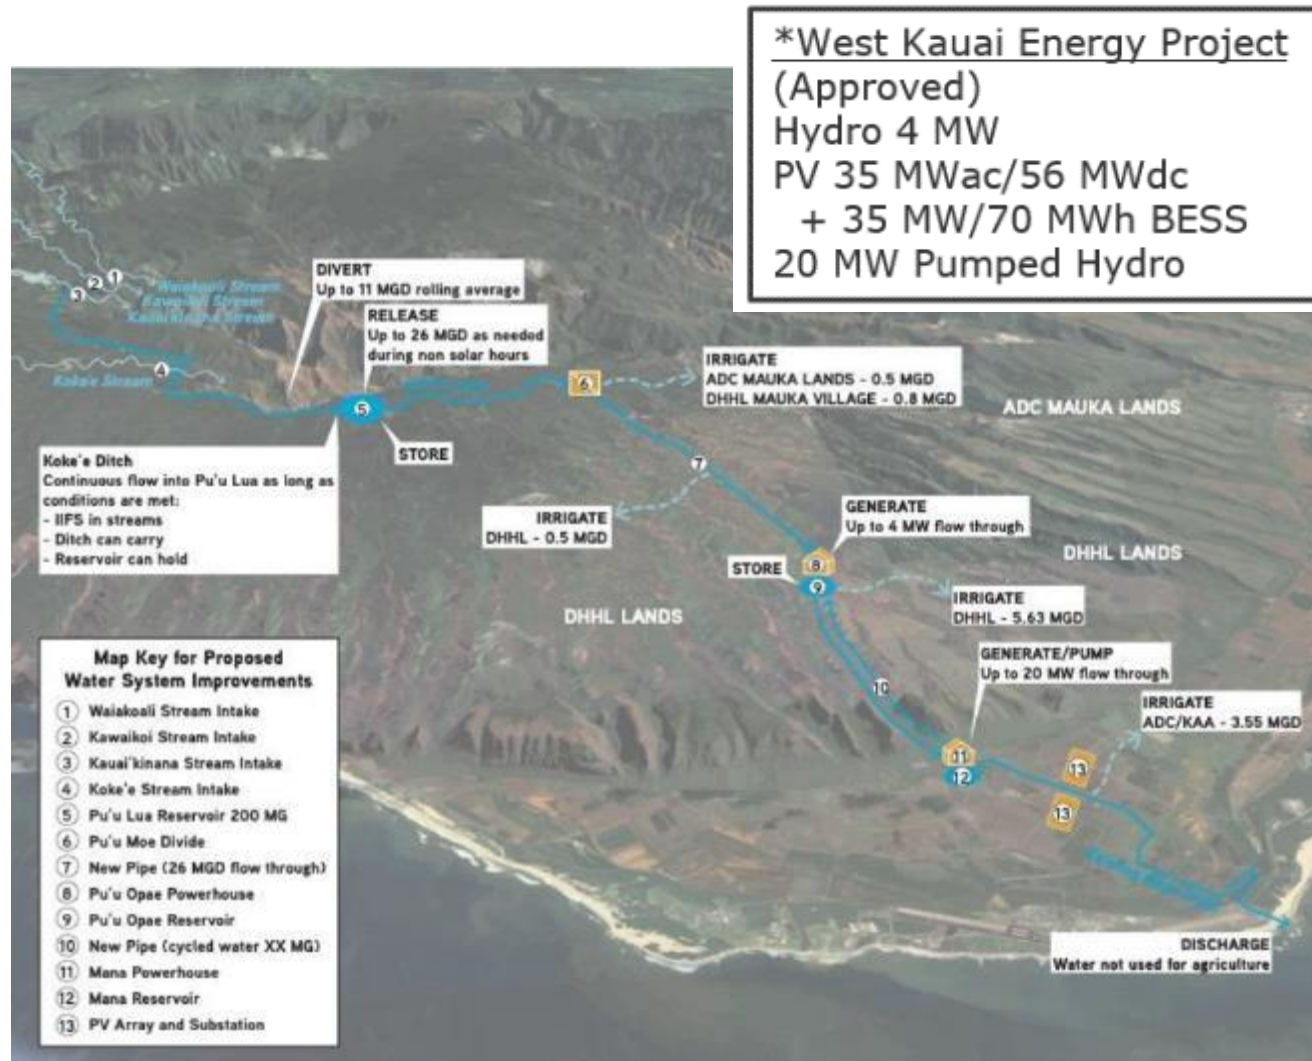

Average Residentail Rates 2022 (cents/kWh)	
Kauai	39
Oahu	43
Big Island	48
Maui	43
Lanai	55
Molokai	53

<https://energy.hawaii.gov/energy-data/>

Source: KIUC

West Kaua'i Energy Project (WKEP)

- KIUC's new renewable resource options are limited to solar and hydro
- WKEP meets up to 25% of KIUC's energy needs
- Will push KIUC close to 90% renewable energy
- Long duration storage capabilities significantly extends 100% RE operating time

BESS for Island Power Systems

Maui Wind Integration – Kaheawa II Wind Plant

Facility	Percent of available energy delivered (% before / % after)	% increase in delivered energy
Kaheawa I	97% / 99%	2%
Auwahi	72% / 84%	17%
Kaheawa II	27% / 45%	68%

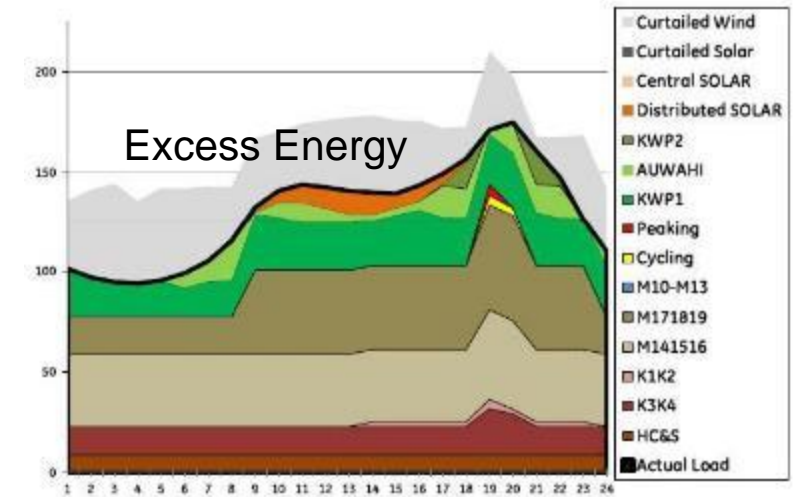

BESS Function

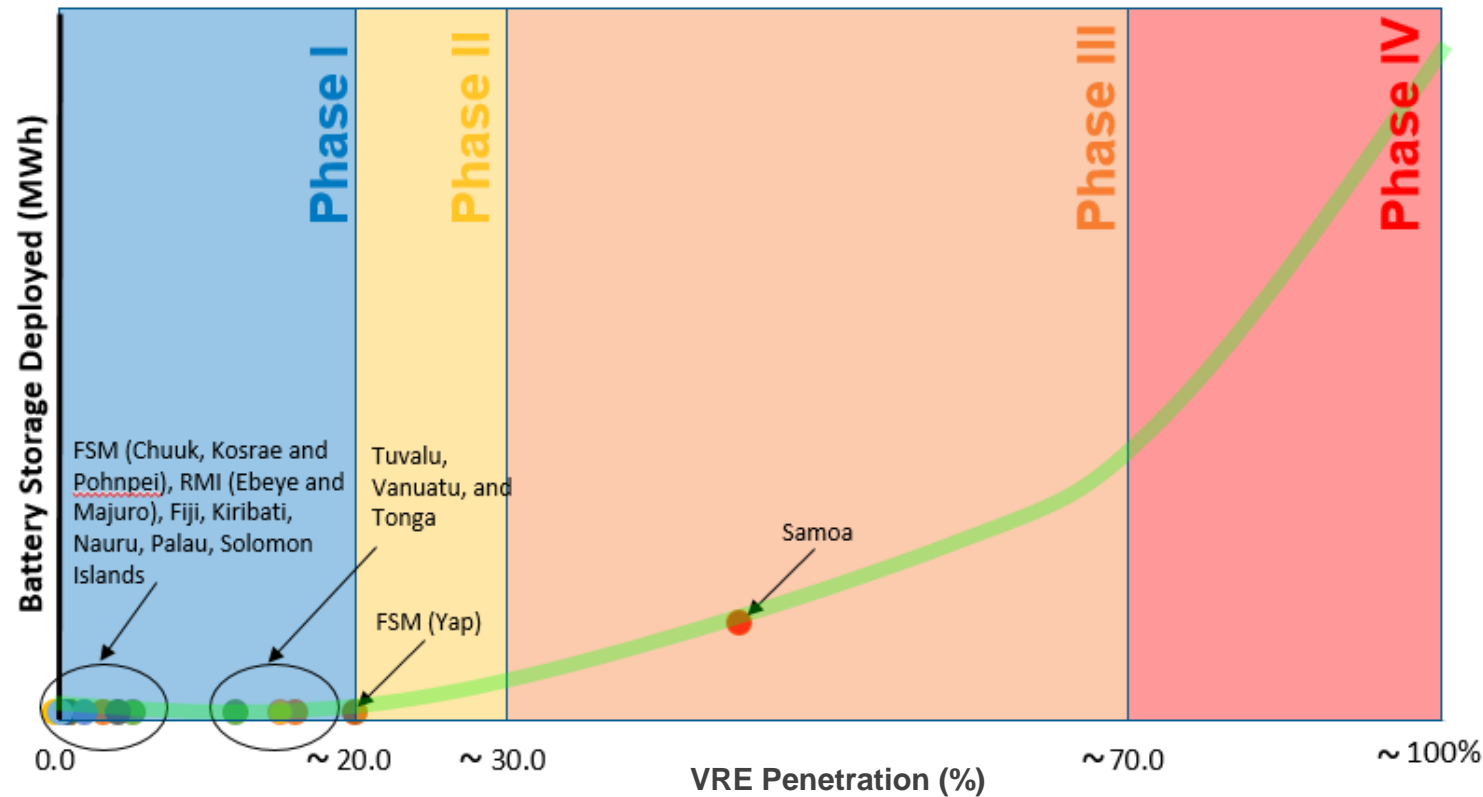

- 10MW / 20MWh
- Manual and AGC Dispatch
- Aggressive Frequency Response
- Ramp Rate Limit within a limited SOC Range

MECO Operations

- Include 10MW of BESS in Up Reserve
- Reduce Down Reserve of M14 & M16 by 1.5MW
- Reduced Operation of K1 and K2
- 50MW Up-Reserve Limit

Example Case – HNEI Report on Curtailment Mitigation in PICs

New VRE Resources

- Case 1: Incremental Solar (100%) 
- Case 2: Incremental Solar-Wind (50%-50%)  

#	Island	2020 Peak (MW)	2020 RE %	2020 VRE %

Select takeaways from HNEI's assessment of PIC systems

- Geographic and resource diversity of VRE generation has the effect of smoothing the aggregate VRE power output
- BESS effectively captures and shifts VRE energy production, enabling increased VRE penetration and reducing excess energy curtailment to economically viable levels
- At moderate levels of VRE penetration (e.g., 30 - 50%), a mixture of PV and wind resources combined with BESS results in less VRE excess energy curtailment (and reduced amount of energy shifting BESS needed) versus a PV only case
- However, as VRE penetration reaches higher levels (e.g., > 70%), having a significant portion of wind resources diminishes the ability of energy shifting BESS (e.g., ~3 to 5 hour BESS) to reduce curtailment (shown to the right in red), due to relatively longer duration low and high wind periods (spanning days or weeks) when compared to the diurnal solar cycle
- As VRE penetration is pushed to very high levels (and approaches 100%), the need for long-term storage grows dramatically and economic viability is strained
- Retaining a modest level of thermal generation can offset the need for long-term storage while securing adequate generation capacity and energy availability for isolated island grids

Curtailment on Kosrae at 70% RE purely from PV and a 5-hr BESS

Curtailment on Kosrae at 70% RE with 50/50 PV/wind and a 5-hr BESS

Mahalo!

Established to develop and test advanced grid architectures, new technologies and methods for effective integration of renewable energy resources, power system optimization and resilience, and enabling policies

- Serves to integrate into the operating power grid other HNEI technology areas: energy efficiency, renewable power generation, biomass and biofuels, fuel cells and hydrogen
- Strong and growing partnerships with Hawai'i, national and international organizations including Asia-Pacific nations

Leon R. Roose

Chief Technologist

Mr. Roose is a tenured faculty member of the Hawai'i Natural Energy Institute (HNEI), University of Hawai'i at Mānoa, where he formed and has led for over a decade HNEI's Grid**START** (Grid System Technologies Advanced Research Team), a team of professionals focused on energy transition enabling policy and regulation, advanced grid architectures, grid modernization technologies, and novel methods to achieve reliable grid integration of RE resources, power system optimization and energy resilience goals.

He served in numerous leadership roles at the Hawaiian Electric Company for 19 years prior including management of renewable energy planning and integration, generation resource planning and competitive procurement, negotiation and administration of all power purchase agreements for the utility, transmission and distribution system planning, smart grid planning and projects, system relaying and protection, and fuel purchase and supply to all utility generating plants. He is a licensed attorney, formerly in private law practice in Hawai'i and served as Associate General Counsel at Hawaiian Electric. He holds a B.S. in Electrical Engineering and a J.D. from the University of Hawai'i at Mānoa.

Marc M. Matsuura
Sr. Smart Grid Program Manager

Mr. Matsuura joined the Hawai'i Natural Energy Institute (HNEI), University of Hawai'i at Mānoa, in 2013 as its Senior Smart Grid Program Manager. He is a founding member of HNEI's **GridSTART** (Grid System Technologies Advanced Research Team), a team of professionals focused on energy transition enabling policy and regulation, advanced grid architectures, grid modernization technologies, and novel methods to achieve the reliable grid integration of RE resources, power system optimization and energy resilience goals.

Prior to joining HNEI, he was with the Hawaiian Electric Company for 21 years. His career at Hawaiian Electric included positions of leadership in the areas of transmission and distribution (T&D) engineering, T&D standards and technical services, system operation, transmission planning, smart grid planning, and system integration. Marc is a licensed professional electrical engineer in Hawaii. He holds a B.S. in Electrical Engineering and an M.B.A. from the University of Hawai'i at Mānoa.

Damon L. Schmidt

Senior Energy Regulatory/
Policy Analyst

Grid System Technologies Advanced Research Team

Mr. Schmidt is a Senior Energy Regulatory/Policy Analyst with Grid**START** (Grid System Technologies Advanced Research Team), a research group within the Hawai‘i Natural Energy Institute (HNEI), University of Hawai‘i at Mānoa. Grid**START**’s focuses on energy transition enabling policy and regulation, advanced grid architectures, grid modernization technologies, and novel methods to achieve the reliable grid integration of RE resources, power system optimization and energy resilience goals.

Mr. Schmidt has over 15 years of energy sector work experience. Prior to joining HNEI, he served as the Director/Manager of Hawaiian Electric Company’s Regulatory Non-Rate Proceedings group, and in outside regulatory counsel and financial consulting roles for Hawaiian Electric as both a solo practitioner, and with the law firm of Goodsill Anderson Quinn & Stifel. Mr. Schmidt delivered key regulatory and financial guidance to shape Hawaiian Electric’s positions in its many proceedings before utility regulators. He is a licensed attorney in the State of Hawai‘i and holds a B.S. in finance from the University of Hawai‘i, an M.B.A. (international business focus) from Pepperdine University in California, and a J.D. from the University of Hawai‘i William S. Richardson School of Law.
