

# NDCs, Net Zero , SDGs and The Role of The Electricity Sector *Future is Electric*

Atul Raturi

The road to net zero

2015
2015-2017
2020-2021
2030
2050

**2015**  
196 countries adopted the historic Paris Agreement to reduce global warming and build resilience to climate change. Its overall goal: limit warming to no more than 1.5 degrees Celsius.

The road to net zero

2015
2015-2017
2020-2021
2030
2050

**2015-2017**  
Parties to the agreement began submitting climate action plans known as nationally determined contributions (NDCs). Initial commitments, even if fully implemented, would only be enough to slow warming to 3 degrees. Urgent calls for action and ambition gained momentum as the plans would not stop catastrophic impacts.

The road to net zero

2015
2015-2017
2020-2021
2030
2050

**2015-2017**  
Parties to the agreement began submitting climate action plans known as nationally determined contributions (NDCs). Initial commitments, even if fully implemented, would only be enough to slow warming to 3 degrees. Urgent calls for action and ambition gained momentum as the plans would not stop catastrophic impacts.

The road to net zero

2015
2015-2017
2020-2021
2030
2050

**2050**  
The transition to net-zero emissions must be fully complete.

The road to net zero

2015
2015-2017
2020-2021
2030
2050

**2030**  
To keep warming to 1.5 degrees, countries must cut emissions by at least 45 per cent compared to 2010 levels.

# The Science is Clear: More Efforts Needed

195 countries  
have  
submitted  
their NDCs

Climate change mitigation objectives should be achieved keeping sustainable development and poverty eradication into consideration. ( The Paris Agreement)

# Required Sectoral GHG Reduction (IEA-SDG Scenario)

IEA. License: CC BY 4.0

● Power ● Other energy transformation ● Industry ● Transport ● Buildings ● Agriculture

# Global Energy Scene

TFEC by Source

Power sector emissions over the years

REN21

# The Declining Costs of Solar PV

Global LCOE for newly commissioned utility scale systems (2010-2022)

Installation costs utility scale PV systems (2010-2022)

# Clean Energy Technologies Ramp Up Needed

Key clean technologies ramp up by 2030 in the net zero pathway

Note: MJ = megajoules; GDP = gross domestic product in purchasing power parity.

Not forgetting more than 700 m people without electricity and 2.6 Billion without clean cooking technologies.

Good News! Solar Investment will exceed Oil investment in 2023

195GW new solar PV in 2022

# PICT NDCs

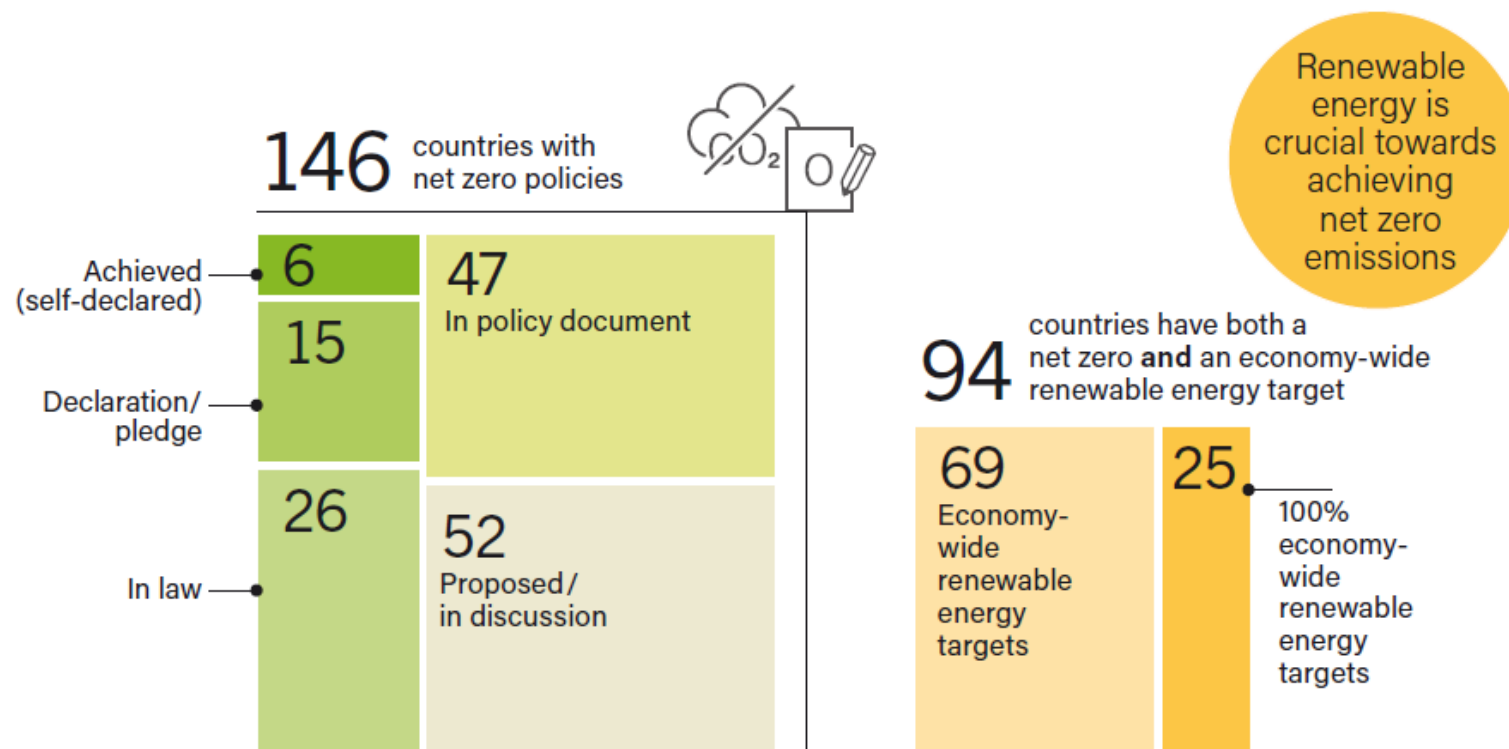

PICT	NDC Targets
Cook Islands	<u>Reduce emissions from electricity generation by a further 43%, totalling an 81% emissions reduction by 2030 (relative to 2006)- Conditional</u>
Fiji	<u>30% reduction in GHG emissions ( 20% from RE in electricity conditional) . 10 % EE</u>
Kiribati	<u>Reduce emissions by 35,880tCO2e annually by 2025 and by 38,420tCO2e annually by 2030 ( conditional)</u>
Marshall Islands	<u>Reduce GHG emissions to at least 32% below 2010 levels by 2025 and further to at least 45% below 2010 levels by 2030. ( Conditional)</u>
Micronesia (Federated States of)	<u>35 % reduction in GHG ( conditional ). 28% reduction by 2025 - baseline 2006</u>
Nauru	<u>100% RE on grid by 2050 ( 61% conditional)</u>
Niue	<u>80% RE in electricity generation by 2025- 69% conditional</u>
Palau	<u>45% renewable energy , 35% energy efficiency by 2025, 22% energy sector emissions reductions below 2005 levels by 2025- 95% conditional</u>
Papua New Guinea	<u>78% of electricity from renewable energy sources by 2030 - 100% conditional</u>
Samoa	<u>100% Electricity from Renewables by 2025 ( Conditional) ( 26% reduction by 2030 overall)</u>
Solomon Islands	<u><b>27% reduction in GHG emissions by 2025 and 45% reduction in GHG emissions by 2030 ( Conditional)</b></u>
Tonga	<u>13% reduction in GHG emission by 2030 compared to 2006 through a transition to 70% RE electricity as well as energy efficiency measures (100% conditional)</u>
Tuvalu	-
Vanuatu	<u><b>100% renewable energy in the electricity sector by 2030 ( Conditional)</b></u>

Mostly conditional and involve the Electricity Sector

8 PICTs have submitted their Enhanced NDCs

 **FIGURE 8.**  
Countries with Net Zero and Renewable Energy Targets, 2022

Source: See endnote 145 for this module.

# UN SDG - 17 Goals, 169 Targets (2015-2030)

SDG 7: Ensure access to affordable, reliable, sustainable and modern energy for all.

Main driver for many other SDGs!

# SDGs and NDCs

“ The SDGs are integrated and indivisible, balancing economic, social, and environmental dimensions of sustainable development, whilst the Paris Agreement aligns with the 2030 Agenda and demands urgent climate action, The alignment of these two agendas is imperative to reduce duplication and increase efficiency - maximizing resources, technical capacity, information, and expertise sharing “ UNDP 2017

NDCs Legally  
Binding

SDGs not Legally  
Binding

# SDG 7 Progress ( Global)

- **Access to electricity**

Globally, 91 percent of the population had access to electricity in 2020, leaving **733 million people unserved**

- **Access to clean cooking technologies**

In 2020, 69 percent of the global population had access to clean cooking fuels and technologies.

- **Renewable energy**

In 2019, the global share of renewable energy sources in total final energy consumption (TFEC), including traditional uses of biomass, was 17.7 percent,

- **Energy efficiency**

The primary energy intensity was 4.69 megajoules (MJ) per U.S. dollar in 2019. 1.5 percent improvement from 2018

- **International public financial flows to developing countries in support of renewable energy**

The international financial flows to developing countries in support of clean energy were USD 10.9 billion in 2019.

# SDG 7 Indicator: Electricity Access

Sustainable Development Goal 07 - Affordable and Clean Energy					
	2016	2017	2018	2019	2020
<b>Indicator: 7.1.1 Population with access to electricity</b>					
Cook Islands	<a href="#">99.9</a>	<a href="#">99.9</a>	<a href="#">100</a>	<a href="#">100</a>	<a href="#">100</a>

FESRIP Vol.2

8 PICs have now submitted their enhanced NDCs.

# A Net-Zero Plan

REN21, GSR

- 20 nations ( including EU) emit about 75% of the global GHGs
- Many cities, Educational Institutes and Financial have joined the ;race to zero pledge
- **Four Pacific Island Countries (Fiji, Vanuatu, Tonga and RMI) have prepared their Low Emission development Strategies ( LEDS)**
- **Port Vila call for Phase Out Fossil Fuels ( PETMM 2023)- Just transition**

# Future is Electric

“Electricity is taking on an ever-more central role in the lives of consumers and, for an increasing number of households, it promises to become the energy source on which they rely for all their everyday needs: mobility, cooking, lighting, heating and cooling. The reliability and affordability of electricity is set to become even more critical to all aspects of people’s lives and well-being.”

IEA , WEO 2021

“(RE) Electricity  
is the new oil”

WEC

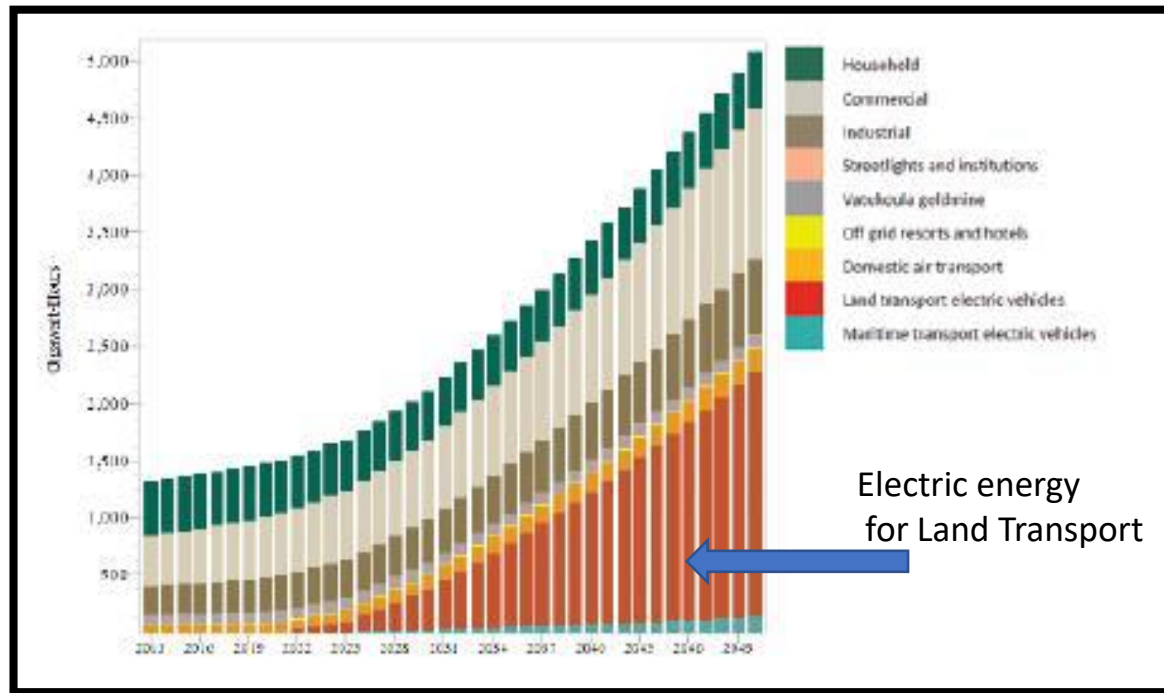

Synergising NDCs and SDGs

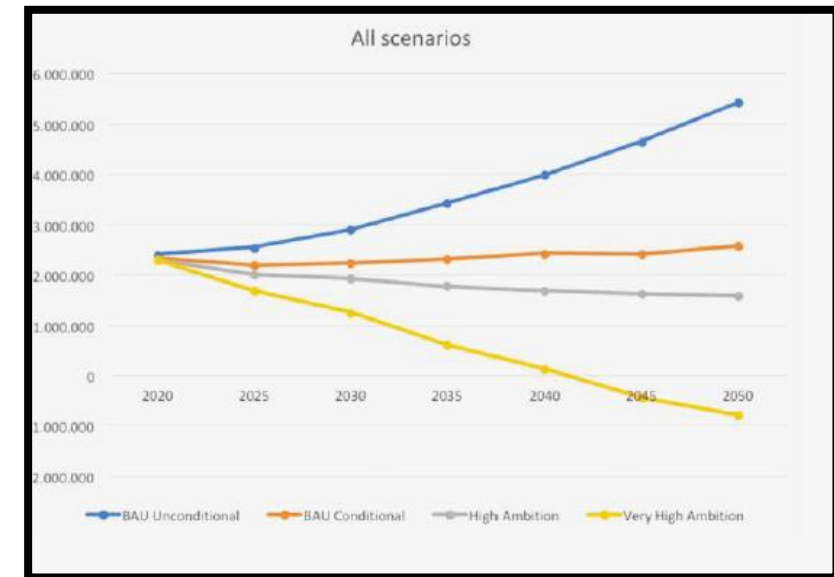

Emissions reduction

(IRENA)

# Future is Electric : Fiji LEDS

High Ambition Scenario : Electrify most energy processes

# Vanuatu LEDS

Vanuatu had a net negative emissions balance in 2015

Figure 12: Vanuatu's GHG emissions under the BAU pathway (excluding forest removals)

Figure 17: Annual net emissions, BAU vs. LEDS, relative to 2020 baseline of 6,341,000 tonnes removals (negative emissions)

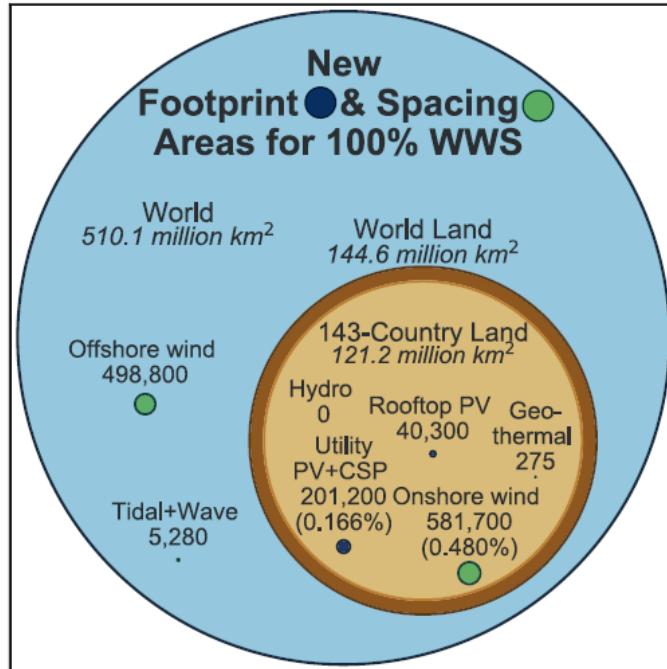

Energy supply mix, BAU vs. LEDS pathways

# 100 % RE scenarios

- 100% RE energy (WWS) based solutions proposed for 143 countries

( Jacobson et al, One Earth, 1(4), 2019

100% RE in Australia  
( Bleakers et al, Energy 133, 2017

## Zero oil, gas and coal in 2050

- **85%** reduction in emissions
- Electrify everything (transport, heating, industry etc)
- → **treble** electricity production
- → deploy ~**15** GW per year of solar & wind

# Electricity Sector and NDCs, SDGs and Net Zero

- Power sector plays a crucial role in climate change mitigation
- Electricity providers should be part of all sectorial planning
- No 'one size fits all' : each country/utility is different
- Research and resource data needed to design/implement appropriate systems
- Innovative Financing , Carbon Credits. Productive use of energy, Human and technical Capacity
- COP27: The new Loss and Damage Fund : Cyclone/climate change related damages to power infrastructure

Question : Are the regional utilities/electricity providers equipped to support their governments' ambitious commitments and targets? If not, what is the way forward ?

# Capacity Building @USP

- Accredited BE programmes in Mechanical and Electrical Engineering.
- BSc in Physics and BE in Civil Engineering TNA
- PGD, Masters and PhD

## **Sustainable Energy Training Centre @ USP TAFE**

- Grid Connected PV Systems - Design and Install
- Stand Alone Power Systems (Off-Grid) -Design and Install
- Battery Storage Systems for Grid Connected PV System - Design and Install
- Online with hands-on training : Accredited Certification

**Centre being established in collaboration with SEIAPI** ( Funding needed for equipment for hands-on training).

**UNEP- USP Technology Need Assessment (TNA) Project : A regional project aiming to develop tangible project concept notes by national stakeholders.**

Thank you
